SOLAR F3500 PM

Photovoltaic Panel Mounting Machine

SOLAR F3500 PM

The configuration of current photovoltaic systems has reached such dimensions that the manual handling of panels for installation is increasingly problematic.

B.P. Metalmeccanica, always very attentive to the evolution of the sector, taking into account the needs expressed by the various operators, has designed and created **SOLAR F3500 PM**, to assist the operators in the various construction sites in this task.

The experience gained with **Solar Cleaner F3500 Telescopic** has allowed us to create a machine that places the panels automatically, based on the required position.

Reducing construction costs is the objective achieved.

- Ability to position panels from 1 to 6 meters away from the machine.

Technical features	UOM	Value
Width	mm	1800
Load capacity	Kg	1500
Max outstretched arm	mm	6000
Cycle time	sec	*58
* Variable based on the required position of the panels.		

- Fully automatic placement of panels according to the required position.
