Stained-glass windows since 1905

Studio d'Arte e Architettura Albertella
Genoa (Italy)

Company presentation

The Albertella family has specialized in the creation and restoration of artistic stained glass windows for five generations. The company was founded in 1905 in Milan by Mario, who established the "Casa d'Arte Albertella"

His son, Raffaele, joined his father in the business until 1948, when, after being awarded the contract for the restoration of the artistic stained glass windows of Genoa Cathedral, he relocated to Genoa and founded the "Studio d'Arte Prof. Raffaele Albertella"

In 1961, his son Riccardo took over and established the "Studio d'Arte Albertella" leading the company until 1997, when his sons, Dr. Luca and Architect Davide, joined the business, forming the current company, "Studio d'Arte e Architettura Albertella"

In 2000, the Studio expanded its visibility by opening a showroom at Via Orsini 31r.

In July 2012, the Studio was entered in the "Registro Imprese Storiche" (Historical Companies Register), the register of companies that have made Italian history.

In December 2023, the firm was awarded the title 'Bottega Storica' (Historical Workshop) and entered in the relevant register.

In January 2025, he participated in and won the competition for the creation of the "Best Cover" award of the singing event "Sanremo Festival 2025." On February 14, the award is presented to the winners: Giorgia and Annalisa.

Processing characteristic of the Company

The "Studio d'Arte e Architettura Albertella" has been shaping and molding glass in all its forms since 1905, creating unique works such as artistic stained glass windows, skylights, vertical walls, partitions, backlit paintings, artistic tops for public places, and artistic installations for exhibitions.

The glass works that Studio Albertella creates are made with the techniques of hand painting (Grisaille) with Grand Fire firing (according to ancient Medieval traditions), polychrome natural glass binding, Tiffany binding and Glassfusion.

The painted glass works in addition to cutting cartons with double-bladed scissors, cutting the glass tiles with diamond-tipped wheels, binding with double-strength drawn wire and soldering are characterized by the techniques of "filettatura" (ground earth mixed with fatty essences), "bistratura" (ground earth diluted in water), "inceratura" (virgin beeswax poured on the edges of the glass tiles), "patinatura" and firing in the "muffola" (ancient kiln).

We deal with artistic stained glass windows from design to installation taking special care of the artistic stained glass windows-environment relationship. Works for villas, hotels, places of worship, shopping centers, ships, yachts, airports, theaters, stations, museums, and hospitals are designed and executed.

In addition to new creations, restorations are carried out on artistic stained glass windows.
