CityClock - GPS Street Clocks

CityClock is the civic clock designed to meet the needs of modern public infrastructure, where punctuality is essential and aesthetics must harmonize with the environment.

Thanks to GPS synchronization, every CityClock is always updated to the exact time, regardless of power outages or time zone changes.

This technology eliminates the need for manual adjustments, reducing maintenance costs and ensuring reliability.

Its robust structure, built to withstand all weather conditions, and the possibility of choosing from various styles and mounting supports, make CityClock the ideal solution for:

- Town squares and historic centers
- Train and subway stations
- Airports
- Parks, campuses, and pedestrian areas
- Sports facilities, golf clubs, and hospitality structures

With CityClock, time becomes a part of urban decor—precise, visible, and recognizable.
