

PLASTITALIA S.P.A.

High Performance Fittings

We are an Italian company focused on the manufacture of polyethylene fittings for the pipelines of water, gas and industrial fluids. Our mission is to manufacture quality fittings made to last for a long time, thinking about future generations.

WHO WE ARE

We connect experience to the future

For more than 30 years, we stand out for the quality of our products and for engaging in technological innovation, ensuring high performance and environmental sustainability. Our international presence ensures technical support and training, reinforcing our commitment in improving people's lives around the world.

Our History

WHERE WE ARE

We are 100% Italian. On 5 continents

We design and manufacture our products entirely and exclusively in Italy. We take the excellence of research and Made in Italy technologies to more than 80 countries, aiming to improve the quality and performance of construction sites everywhere in the world.

APPLICATIONS

We are present in different sectors

Our technologies and products contribute to share resources more efficiently, safely, and in a sustainable way in several application fields.

OUR FITTINGS

We go big

Research and development, innovative production technologies, quality raw materials, product customisation and digitalisation are the drivers of excellence that allow us to offer one of the world's most complete ranges of polyethylene fittings, able to guarantee even large diameters of up to 2,000 millimetres by injection moulding.

Our range

Electrofusion
fittings
from Ø20 to Ø2000

Spigot
fittings
from Ø20 to Ø2000

Steel
flanges
made of various materials

Transition
fittings
from Ø20 to Ø315

Fabricated
fittings
from Ø180 to Ø630

Custom made
fittings with any profile,
curve radius and diameter

OUR WELDING MACHINES

We design perfection

Designed by Plastitalia research, iPlast welding machines represent the most advanced standards in the polyethylene pipe and fitting welding industry, also in terms of operation over time, thanks to their ability to achieve maximum efficiency from energy exchange.

Intuitive use for

geolocalize and record the welding
position in the control unit

QUALITY

We ensure excellence

We share with all the people who work with us our most important commitment: to ensure our customers the highest levels of excellence in products and services. A tangible commitment that every day we renew to achieve new goals.

Certifications

We guarantee very high quality standards and this commitment to excellence is recognised by more than 80 company certifications, including FM Approval, KIWA, WRAS, IIP and Bureau Veritas.

Our production and organisation supply chain is certified according to the UNI EN ISO 9001 Quality Management System.

Testing Laboratory

The Plastitalia testing laboratory has obtained UNI CEI EN ISO/IEC 17025 quality scheme accreditation for testing polyethylene pipes, fittings and valves.

certifications

DESIGN SUPPORT

We help customers design safely

Excellent project design reduces time, costs and unexpected events. That is why we are close to our customers from the initial planning stages to develop customised solutions, with shapes and sizes personalised to the customer's requirements, and suggest the best choices for fittings systems.

Research & Development

A team of engineers constantly researches and designs new solutions, ensuring that all products comply with strict production parameters.

Starting from the design step, our Research and Development department supports the customer in the choice of customised products for his system, making the piping system design process more efficient and high-performance.

Plastitalia's BIM world

To support the customer's design team, we also provide BIM (Building Information Modelling) libraries of our products, which are compatible with Autodesk Revit® software.

When using our BIM libraries, we offer a complete service with a BIM Specialist, an expert in 3D modelling of fittings.

LOGISTICS

We are close to you

Our logistics team guarantees the immediate availability of products to the market thanks to a strong effort to maintain constant stock levels. We have set up production and logistics procedures to reduce delivery times as much as possible.

Milan Logistics Hub

We have a logistics hub in Milan to shorten delivery times in Europe as much as possible and increase the efficiency of our distribution.

within
24 hrs

within
48 hrs
in the world

Customs Activities

Our company received the IT AEO 211816 (Authorised Economic Operator) authorisation to speed up logistics operations to foreign countries:

- Lower customs controls
- Priority processing
- Fast track access corridors

In addition, the presence of an in-house customs office allows real facilitation in customs matters.

TRAINING

We develop certified skills

We continuously invest in training, both for our employees and our customers. We provide dedicated courses to improve skills and achieve certified qualifications, ensuring professional growth and updating.

IPlast Experience

Plastitalia's training centre specialises in the training of skilled technicians in the use of materials and equipment for the construction of polyethylene systems, in particular for the use of our products and the management of welding processes, including the certification according to the requirements of UNI EN 13067.

E-Learning

Our e-learning platform offers a wide range of video courses that can be used remotely anywhere in the world, including learning media, evaluation quizzes and certificates of skills acquired.

Training Week

An annual event dedicated to the continuous training of our employees. During this week, our employees have the opportunity to attend training courses held by relevant speakers of the industry.

DIGITAL TOOLS

We upload practical digital tools online

We develop a wide range of online tools for experts working in the polyethylene systems industry, designed with the support of our experts and constantly updated.

Plast App

A smartphone application that allows you to calculate the technical parameters of polyethylene systems while working on site.

Online Tools

Advanced tools designed to simplify set-up and analysis in the different applications of polyethylene systems. Thanks to an intuitive interface, they provide reliable results that can be used for drafting improved technical reports.

B2B / H2H portal

A portal that gives customers quick access to manage orders in total autonomy. On the portal you can enter orders, check products availability, look up related documentation and track shipments in real time. An online booking tool with our sales team is also available.

SAFETY

We consider safety our priority

Safety is the core of our company and is an essential value in every aspect of our work. We believe that guaranteeing the security of our products, our IT systems and our working places contributes to a safe and reliable environment for everyone.

Products safety

We produce our electrofusion fittings with greater thickness and larger welding areas. This ensures greater safety during use.

IT security

We apply strict IT security practices to protect the sensible data of our customers and our internal processes.

Workplace safety

We are committed to providing a safe and healthy working environment where strict safety standards are observed. We continuously train our employees on safe practices and the adoption of safety precautions.

SUSTAINABILITY

We believe in a better future

As a company with a global presence, we feel a responsibility to contribute to solving social and environmental problems. Our commitment is declare in a single goal: to be an increasingly sustainable company, a leader of positive change, through the development of ESG issues.

Environment

We manufacture products that are designed long-lasting and ensure the reduction and pollution of water.

We are committed to constantly reducing the impact of our activities on the environment, at all stages of the production supply chain.

Social

We value the people who work with us through skills development, respect for rights and diversity, and safety at workplace.

We contribute to the well-being of the territories in which we are located by supporting social activities and creating shared value.

Governance

We create a governance model inspired by the ethical values of transparency and fairness, including the application of the Organisation, Management and Control (OMC) model in line with Legislative Decree 231/2001.
