

MOTORISED SYSTEMS

by **Digisonic**

ABOUT

Digisonic is a leading company in the field of retractable motorised systems and motorised sliding door mechanisms. All of our works are focused to enhance all of interior spaces serving technology by integrating our creations with your décor.

Thanks to our tv lift mechanisms, you'll be able to move your TV with a small remote control, hiding the TV inside a piece of furniture or ceiling and making them appear whenever you want.

Our motorised systems offer complete versatility and customisation, allowing the integration of high-tech solutions even in the smallest spaces, while maintaining the harmony and arrangement of the furniture. Our flexible design approach helps architects, carpenters and designers to create living environments with freedom and expression.

Freedom of applications...

We follow each operation step by step through an initial consultation service to identify the perfect tv lift to be integrated into furniture and/or walls just like a tailor-made suit. Each product is designed and made entirely by us, a made in Italy assembled part after part with the utmost care and precision. Depending on one's needs, we have identified a number of TV lifts with different features, including a rotation of up to 350° to allow convenient viewing from all points in a room.

1.

2.

Thanks to their functions, these kind of systems can be positioned everywhere: inside a bedroom in front of your bed, in a lounge area to entertain your guests, in a middle of an open space with its rotational movement to be managed for optimal viewing from every point in the room ecc.

With a very small and silent track, your luxury environments will be enhanced with a beautiful and innovative aesthetic. Without a manual lock, the door will be cleaner with a minimal design. For a wardrobe room, a motorized sliding glass door will be the most elegant solution. Generally, for big passages our sliding door systems will give more light and more available space instead of traditional swing doors.
