AUTOMATED NDT SYSTEMS USING PHASED ARRAY TECHNOLOGY FOR AERONAUTICAL PARTS

ADG designs , manufactures and delivers key in the hands automated NDT systems to check aeronautical parts using the Phased Array Technology.

Thanks to their high performances those systems are able to detect defects (as delamination , porosity etc.), to store the results of the scan and issue a report automatically.

The results of the scanning are fully in compliance with the most restrictive procedures of all the worldwide manufacturers of aircraft and with all the International normatives.

Just tell us what you would need to check, we will create an optimized automated system to achieve the best results.
