

ADG designs, manufactures and delivers key in the hands automated NDT systems to be integrated on the production line.

They can be equipped with instruments, probes, adaptors and even robots (to load and unload the pieces) depending from the customer needs and from the configuration of the parts that needs to be inspected.

Customized software allows a better and faster work flow having the best possible NDT performances.

Official reports are automatically issued and stored and they are fully in compliance with the most restrictive International rules.

Contact us, explain us your needs and you'll have your best optimized automated system option.
