2025
EDITION

Ornithology at your fingertips: **FLY RAGGIO DI SOLE** constitutes a **COMPLETE RANGE** of feeds specifically designed for **PROFESSIONALS AND HOBBYISTS** with different families of caged and aviary birds, from canaries to large parrots, including exotic and native birds. Our careful selection of raw materials, experience in the field of ornithology and exclusive formulas enable us to satisfy the food needs of the various bird species. The range includes complete and complementary feed such as seed mixes, professional egg foods, pellet, hand-rearing formulas and sticks.

UNICCO

seed eating complete feed

Unicco is the new complete feed line - PASTO UNICO - for small and medium-sized seed eating birds.

Alternative to traditional diet (seeds and eggfood).

UNICCO - COMPLETE FEED - PASTO UNICO

PROTEINE/PROTEINS 16,50%
GRASSI/FATS 9,50%

10766657 1.5kg

107666589 4kg

UNICCO - MAINTENANCE & MOULTING

COMPLETE FEED - PASTO UNICO

Unicco is formulated for the daily feeding of small and medium sized seed eating birds.

OUR ADVICE

Supply in dry form during the maintenance period. Before the breeding season, mix Unicco with Unicco Extra and gradually increase the second one.

PROTEINE/PROTEINS 22.00%
GRASSI/FATS 10.00%

107666591 1.5kg

107666588 4kg

UNICCO EXTRA - REPRODUCTION

COMPLETE FEED - PASTO UNICO

Unicco Extra is formulated for breeding and weaning phase of small and medium sized seed eating birds.

OUR ADVICE

Supply in dry form throughout the breeding season and add one or more of the following options in a separate feeder:

- extruded pellet - softball (Gemme White Blend)
- sprouting seeds (Lipogemma)
- Unicco Extra in wet form

For wet use, add 75 ml water to 100gr of Unicco , wait 20-25 minutes then mix thoroughly then mix thoroughly/shell the product before serving. The moistened product must be replaced daily.

Unicco line Advantages

- Does not create browning
- Reduces waste
- Selected grain size
- Complete and balanced
- Formulated for canaries, finches, small parakeets, tropical birds
- Alternative to traditional diet

UNICCO SCHEME OF USE

as unique feed

MANTEINANCE

100% UNICCO

Dry form

- The special texture makes it palatable to both small beaks and parakeets (budgies, agapornis, Neophema and other small siked parakeets).
- Make sure all subjects take UNICCO before abandoning the previous food line.

MOULTING

100% UNICCO

Dry form

SPECIAL ADVICE

In case of coloring and using **UNICCO as the only food**, the suggested amount of colorant is about 1/3 of the dose used with the eggfood..
Example carophyll 3-4 gr/kg Unicco.

PREPARATION TO BREEDING SEASON

Mix **UNICCO** with **UNICCO EXTRA**, gradually increase UNICCO EXTRA according to the guide diagrams below. All in dry form.

The duration of the various steps depends on the period in which the preparation of the subjects begins. **The goal is to reach 100% UNICCO EXTRA at the formation of couples.**

Example if you start one month earlier in females:

- 80% UNICCO + 20% UNICCO EXTRA - week 1
- 50% UNICCO + 50% UNICCO EXTRA - week 2
- 20% UNICCO + 80% UNICCO EXTRA - week 3
- 100% UNICCO EXTRA - week 4

Example if you start two months earlier in males:

- Example if I start one month earlier in males:
- 80% UNICCO + 20% UNICCO EXTRA - week 1-2
- 50% UNICCO + 50% UNICCO EXTRA - week 3-4
- 20% UNICCO + 80% UNICCO EXTRA - week 5-6-7
- 100% UNICCO EXTRA - week 8

REPRODUCTION

UNICCO EXTRA

Dry form

With chicks add one or more of the following options:

- extruded pellet - softball (Gemme White Blend)
- sprouting seeds (Lipogemma)
- Unicco Extra in wet form

SPECIAL ADVICE

For **Agapornis Roseicollis** we suggest to use **UNICCO** during reproduction season. It's better maintaining low protein level to avoid aggressive behaviours.

Malinois canaries. Unicco does not contain colorants and there is no dimorphism between male and female chicks canaries.

Unicco Extra can be used as a complementary feed for finches, parakeets during breeding season (as an eggfood). The special texture makes it palatable both small beaks and parakeets (budgies, agapornis, Neophema and other small siked parakeets).

EXTRUDED

pellets & softballs

GEMME INSECT BLEND

softballs for insect eating birds

GEMME INSECT BLEND is a complete extruded food (softballs) rich in animal proteins particularly suitable for the breeding of insect eating birds.

Ideal for **HAND FEEDING, WEANING, MOLTING, SINGING AND BREEDING PERIOD.**

Combine with cold water in a 1/1 dose (for example 100 gr of Gemme + 100 g of water), wait about 50 minutes or in a 1/2 dose (100 gr of Gemme + 200 gr of water) and wait about 25 minutes. It can be mixed with water in the evening for use the next morning.

GEMME INSECT BLEND guarantees an intense and prolonged love phase to all birds that need live insects in breeding - insectivores - exotic - finches.

BREEDING

WEANING

MOLT

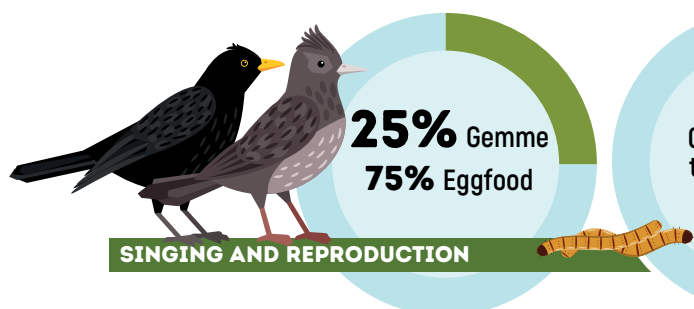

PROTEINE/PROTEINS 35,00%

GRASSI/FATS 9,00%

130078114 1.5kg

8 025698 166502

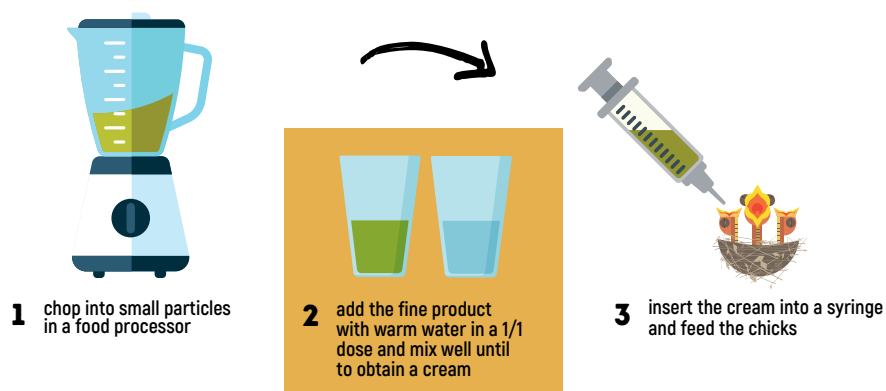

HAND FEEDING

How are they used?

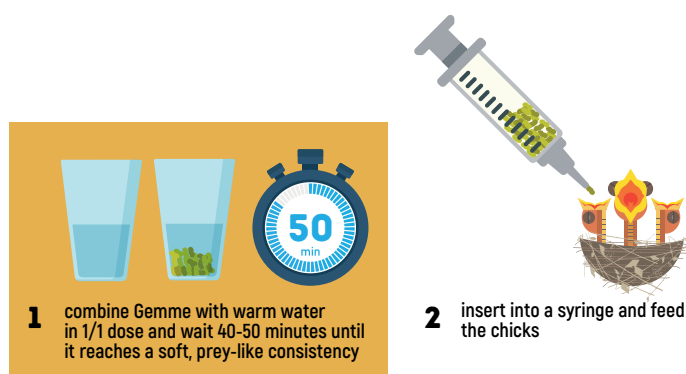

HAND FEEDING - FIRST PHASE (CREAM)

1. Chop Gemme insect Blend with a food processor until it is reduced to small fragments.
2. Add water in a 1/1 dose (for example 100g of Gemme Insect with 100g of water). Mix until you reach a creamy consistency (yoghurt type).
3. Insert into a syringe with dispenser and feed the pullets.

HAND FEEDING - SECOND PHASE (EXTRUDED - SOFT-BALLS)

1. Combine Gemme Insect with water in a 1/1 dose (for example 100g of Gemme Insect with 100g of water), wait about 40-50 minutes. With warm water the time is reduced.
2. Insert the soaked extruded into a syringe with an appropriately sized dispenser and feed the pullets.

ADULTS - REPRODUCTION - SINGING PHASE

1. Combine the extruded with water in a 1/1 dose (e.g. 100g of Gemme Insect blend with 100g of water) and administer in the feeder/bowl with the prey and/or food.
2. Properly accustomed adults use Gemme Insect Blend to feed their chicks and the use of alive insects can be progressively reduced.

GEMME WHITE BLEND

softballs for seed eating birds

GEMME WHITE BLEND is a complete extruded food for granivorous birds (finches, lipochromic, melaninic canaries, shape and position, singing, exotic, small parakeets).

Particularly suitable for the **REPRODUCTION, WEANING, MOLTING OF GRANIVOROUS BIRDS.**

No color formula.

GEMME WHITE BLEND can be used softened with water and combined with a dry egg food (Th White Extra, Th Puro, Amarela Extra, Th World) in these proportions:

20% GEMME WHITE BLEND + 80% EGGFOOD canaries

30-35% GEMME WHITE BLEND + 70-65% EGGFOOD finches

Combine with cold water in a 1/1 dose (for example 100 gr of Gemme + 100 g of water), wait about 50 minutes or in a 1/2 dose (100 gr of Gemme + 200 gr of water) and wait about 25 minutes. It can be mixed with water in the evening for use the next morning.

They replace any further supplements of animal proteins.

PROTEINE/PROTEINS 28,00%
GRASSI/FATS 9,00%

130077039 1.5kg		
107636777 4kg		

How are they used?

SOAKED GEMME

1. Combine Gemme with water in a 1/1 dose (for example 100g of Gemme Insect with 100g of water), wait about 40-50 minutes. With warm water the time is reduced.
2. Add the softened Gemme to a dry egg food (Th White Extra, Th Puro, Amarela Extra, Th World). Mix until you obtain a harmonious and homogeneous mixture with the desired softness.

CHOPPED GEMME

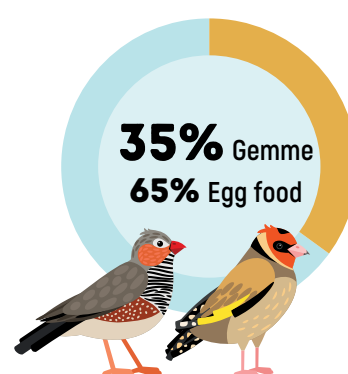

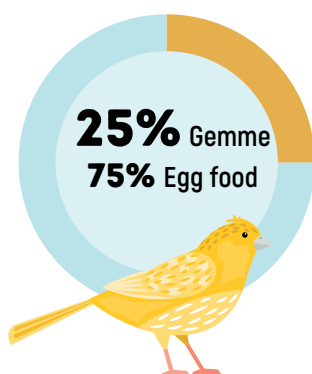

1. Chop Gemme insect Blend with a food processor until it is reduced to small fragments.
2. Mix the extruded fragments with a dry egg food (Th White Extra, Th Puro, Amarela Extra, Th World). Mix until you obtain a harmonious and homogeneous mixture with the desired softness.

PRACTICAL EXAMPLE

80% TH WHITE EXTRA/TH PURO
20% GEMME WHITE BLEND chopped

22,0% Crude Protein
5,5/7,5% Crude oils

MÜSLI BLEND

*extruded pellet with fruit and vegetable for
parakeets and parrots*

MÜSLI BLEND is a complete and balanced feed for parakeets and parrots.

Over-sized pellets help to naturalize **foraging** time¹.

The product contains **BEETROOT, POMEGRANATE ARILS AND BLUEBERRIES** which give the product a redd-purple color appearance, particularly attractive for psittacines. The coloring of the elements is solely the effect of the dyes naturally present in vegetables and fruit.

The **AROMATIC HERBS AND MEDICINAL PLANTS** present (Spirea olmaria, Curcuma longa, Milk thistle, Currant, Aloe, Cinnamon, Oregano, Capsicum) guarantee beneficial effects for the entire gastro-enteric system and exert an anti-inflammatory activity.

The high palatability reduces the period of progressive physiological adaptation to the new feed; however we recommend increasing inclusion of MÜSLI BLEND combined with the usual feed, avoiding sudden nutritional changes.

MÜSLI BLEND is created by our nutritionists from punctual and constant observations on the natural and captive nutrition of psittacines.

Parrots in the wild spend most of the day (about 75%) in foraging. It is therefore necessary to constantly stimulate the parrot's curiosity by offering different feed in different ways so as to guarantee the possibility of being able to choose.

It contains optimal levels of proteins, vitamins, minerals, amino acids and other nutrients needed for growing chicks. Contains multiple sources of protein for flawless plumage.

It guarantees the correct development of the chicks. Counteracts the negative effects of fatigue and stress-related tiredness. Supports metabolism and provides energy. To be mixed with a food or added to dry food (mixed seeds) with vegetable oil.

How to use it?

Mix FERTI-MAX carefully in different doses depending on the physiological phase with a softened soft or dry food.

REPRODUCTION: carefully mix 5-10 gr of FERTI-MAX per 100 g of egg food every day.

For lipochrome canaries we suggest maximum 3 gr per 100gr eggfood.

MAINTENANCE: 5 g of FERTI-MAX per 100 g of food once a week.

For lipochrome canaries we suggest maximum 3 gr per 100gr eggfood.

PREPARATION AND RETURN OF EXHIBITIONS: 5 g of FERTI-MAX for every 100 g of food.

For lipochrome canaries we suggest maximum 3 gr per 100gr eggfood.

Couversole

Litter composed of 100% of natural sepiolite. The heat treatment reduces the development of pests.

GEMME INSECT BLEND is a complete extruded food (softballs) rich in animal proteins particularly suitable for the breeding of insect eating birds.

Ideal for **HAND FEEDING, WEANING, MOLTING, SINGING AND BREEDING PERIOD.**

HAND FEEDING - FIRST PHASE (CREAM)

1. Chop Gemme insect Blend with a food processor until it is reduced to small fragments.
2. Add water in a 1/1 dose (for example 100g of Gemme Insect with 100g of water). Mix until you reach a creamy consistency (yoghurt type).
3. Insert into a syringe with dispenser and feed the pullets.

HAND FEEDING - SECOND PHASE (EXTRUDED - SOFTBALLS)

1. Combine Gemme Insect with water in a 1/1 dose (for example 100g of Gemme Insect with 100g of water), wait about 40-50 minutes. With warm water the time is reduced.
2. Insert the soaked extruded into a syringe with an appropriately sized dispenser and feed the pullets.

For more info see scheme at page 9.

NEW

LORINEC

artificial nectar for lories and lorikeets

LORINEC is a complete feed formulated for parrots belonging to the subfamily Loriinae.

The presence of **essential sugars**, the balanced and specific **mineral-vitamin integration**, the excellent **palatability** and the constant **tests** in professional breeding make the product ideal during all life stages of lories and lorikeets.

Composition: Cereals, Various sugars, Vegetable protein extracts, By-products of beekeeping, Eggs and egg derivatives, Yeasts, Milk and milk derivatives, Minerals, Products obtained by the transformation of herbs.

Use as it is in all the stages of Loriinae's life.

LORINEC is preferably supplied in dry form, but it can be provided mixed with water until a creamy texture. In warm environments, the product should be renewed more than once a day if it is diluted with water. Refresh daily. Provide additional fresh fruit daily. Leave fresh water available.

INSECT EATING COMPLETE FEED

DOREMÌ BREEDING TIME MICROPELLET

Complementary pet food in micro-pellet for insectivorous singing and recall birds.

The balanced presence of proteins of different origins - vegetable, fish, eggs - in addition to the complete contribution of vitamins and oligoelements make Doremì an optimal product for reproductive and singing periods that require a considerable spending of energy.

It is recommended to use Doremì to integrate the maintenance products as **Ventisette, Vivace, Allegro** in the reproductive and singing period.

Singing/breeding formula

PROTEINE/PROTEINS 19,50%
GRASSI/FATS 5,00%

107637024 **10kg**

PIUMÌ MOLT TIME MICROPELLET

Complementary pet food in micro-pellet for insectivorous singing and recall birds. The balanced presence of proteins of different origins -vegetable, fish, eggs- in addition to the complete contribution of vitamins and oligoelements make Piumì an optimal product for the MOLT period.

It is recommended to use Piumì to integrate the maintenance products as **Ventisette, Vivace, Allegro** at the beginning of the MOLT period. It can be used, in this case as it is (not mixing with other products), for debilitated or convalescent birds.

Moulting formula

PROTEINE/PROTEINS 20,50%
GRASSI/FATS 4,00%

107623959 **10kg**

QUIETE REST TIME MICROPELLET

Product having a middle energetic content, integrated with minerals and oligoelements, specific for resting periods characterized by low temperatures, high humidity and low light.

It is recommended to use Quiete to integrate the maintenance products as **Ventisette, Vivace, Allegro** at the beginning of the resting periods.

Rest formula
