HISTORY

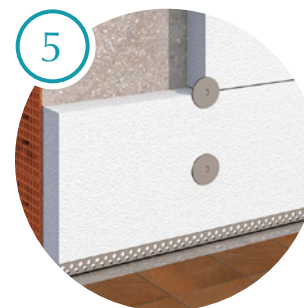

Fullform S.r.l. was founded in 2021 on the solid foundation of Fullwater's decades of experience in the wellness sector. This legacy of expertise allowed the company to start its activities in the local market, quickly establishing itself as a point of reference. Fullform then expanded its presence in central and southern Italy, rapidly achieving national coverage.

Thanks to a significant increase in its customer portfolio and the expansion of its production in the construction sector — particularly interior design and furniture — Fullform also began to establish itself internationally. The company's success can be attributed to its expertise and problem-solving skills, which have enabled it to provide effective solutions and technical support for complex projects.

WHAT WE DO

We design and manufacture custom modular structures in EPS (Sintered Expanded Polystyrene), a high density, self-extinguishing and highly versatile material. Thanks to its lightness and flexibility, EPS allows us to meet all our customers' design requirements, offering tailor-made solutions ranging from adaptable sizes and shapes to weight and water management in swimming pools.

1. Mini pools of various shapes and sizes
2. Indoor and outdoor pool fittings
3. Steam rooms and saunas
4. Elements for wellness centres and spas
5. Multi-purpose insulating panels

6. Frames for indoor and outdoor use
7. Scenographic walls
8. Bathroom & wellness fittings
9. Luxury yacht fittings

OUR ESSENCE

At Fullform, we are committed to turning visions into reality, guided by a clear mission, ambitious vision and core values that guide everything we do. Find out what inspires us and how we work to create innovative and sustainable solutions for wellness and construction.

MISSION

Our mission is to offer everyone the opportunity to live in harmony with their environment, realising their ideal of beauty and comfort. We are committed to providing the freedom to turn visions into reality, creating innovative and unique solutions that improve our customers' quality of life.

VISION

Our vision is to become a world-leading company in the field of EPS modular structures, recognised for excellence in the design and implementation of innovative solutions. We aspire to create a future where our structures are synonymous with quality, sustainability and cutting-edge design, contributing to a more attractive and functional world.

VALUES

We are driven by a commitment to continuous innovation, providing high quality products tailored to meet the unique needs of each customer. We operate with integrity and transparency, fostering collaboration both internally and with our partners. We are passionate about environmental sustainability through the use of eco-friendly materials and efficient processes. Excellence in customer service is our priority, ensuring support and assistance at every stage of the project.

EPS

EPS

EPS (Sintered Expanded Polystyrene) is a product of natural origin that is processed using artificial production processes, making it **100% recyclable** and **non-toxic** (it does not contain CFCs or HCFCs). It is 98% air, with the remainder being carbon and hydrogen, and has a cellular structure which, at the end of the moulding process, takes on the characteristic shape of a compact panel that is also **very light and easy to install**.

The production of **EPS** therefore guarantees **excellent insulation properties against moisture and water**, as well as **excellent resistance to all mechanical stresses**, unaffected by work loads and environmental factors.

HIGH PERFORMANCE IN THE WELLNESS WORLD

Our in-depth **technical and managerial knowledge** in this field, combined with a complete **catalogue of accessories and installations**, make us a reliable partner for **wellness design projects**, ensuring maximum performance in the creation of **pools, swimming pools, spas, steam baths and accessories**.

LIGHTWEIGHT

The incredible **lightweight** is one of the key aspects of our modules, which have a **density** of up to 30 kg/m³. This makes it possible to produce pools weighing **250 to 300 kg/m²**, for example, compared with **800 to 900 kg** for top-of-the-range products made from traditional materials.

MOISTURE

EPS is a **breathable material, permeable to water vapour but impermeable to water**, which does not pass through the walls of the closed cells and is not absorbed by them.

This makes it possible to achieve a high level of thermal insulation and to control any condensation, thus preventing the formation of mould.

INSULATION AND ENERGY SAVING

EPS has a low thermal conductivity due to its conformation, which gives it **high efficiency as a thermo-insulator**.

This characteristic allows **savings of up to 4 times less energy consumption** than, for example, a traditional spa in the same conditions.

EASY TO MOVE AND INSTALL

Our EPS modules simplify logistics and site operations:

- » **Installation is quick and easy thanks to our installation guides;**
- » **Saving on transport costs** and overcoming **site access difficulties** thanks to the lightness of the material;
- » **No protective clothing is required** for handling, storage and installation;
- » the modules **can also be easily modified during installation**, allowing unforeseen design issues to be resolved on site.

AN EXEMPLARY CASE STUDY

We had the privilege of building a mini infinity pool for an international client, complete with installed systems, compensation tank and integrated technical room. This project was designed to meet the need for a lightweight and highly functional product.

The challenges were many: from the dimensional restrictions imposed by the carrier standards to the complexity of implementing the required technical details.

Drawing on our extensive experience in the industry, we innovatively divided the mini-pool into two sections for ease of shipping.

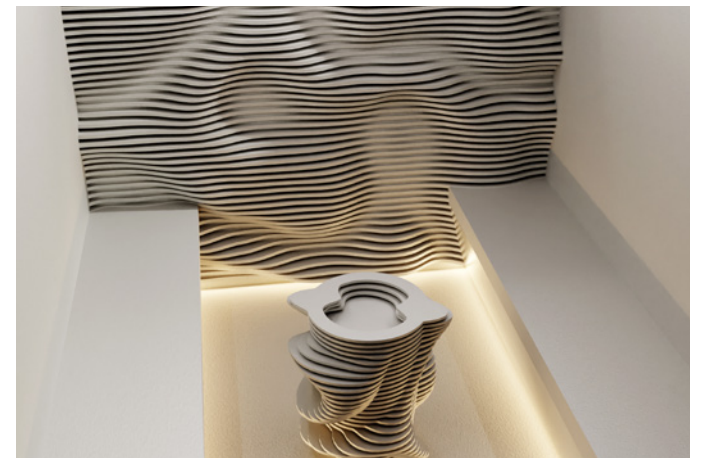

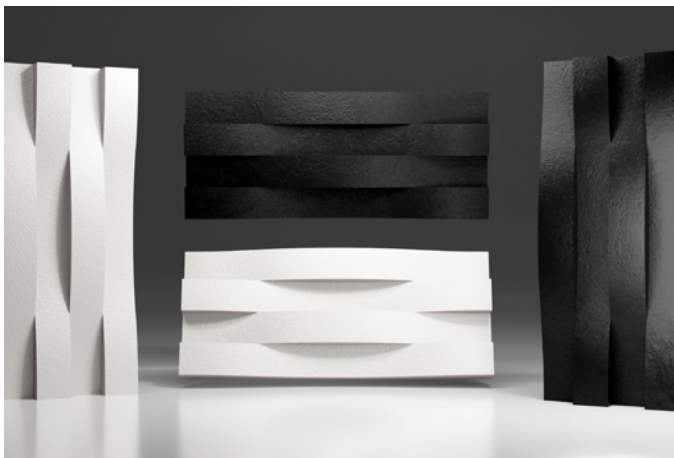

Each pipe connection system was designed with extreme precision and we incorporated a steel perimeter support ring with specially designed joints.

This ensured a perfect connection between the two halves of the mini-pool, while guaranteeing an optimum water buoyancy seal.

This project is a shining example of our ability to meet and overcome the most complex challenges, providing tailor-made solutions to meet our customers' specific needs.
