

MARINI® 1897

A FAMILY STONE COMPANY

SINCE 1897, OUR
FAMILY, OUR PEOPLE,
OUR STONES, OUR
EXPERIENCE AND
PASSION, AT YOUR
SERVICE.

Marini is located in northern Italy, in the Lombardy region, on the western shore of Lake Iseo, in Bergamo province, in the municipalities of Castro and Solto Collina. Now he is building a new factory in Sovero to improve production and logistics.

Our Quarry

In the quarry we use chain saws and diamond wire machines to open new tunnels and to do the cuts to reduce the layers on the floor

Our Stone Process

After being extracted blocks are washed, checked and measured. With our multi-blade or single-blade diamond gang saws, we saw blocks every day, obtaining slabs of various thicknesses, to satisfy customer requests. The slabs are selected and stored to proceed with the required surface finishes. Our company is specialized to produce cut-to-size customized with our exclusive natural stones Ceppo di Gré, Nuvolato di Gré and our reconstructed stone Aggloceppo®, using the newest CNC machines and then finished by hand with professionalism and passions by expert hands

Our Stones

Two Different Stones, From The Same Quarry
The contact between Ceppo and Nuvolato is an extraordinary geological situation.

Observing can be imagined the origin of these two stones and also for this reason Dolomia (Nuvolato di Gré) can be considered the "mother stone" of the Ceppo di Gré.

The contact between Ceppo and Nuvolato is an extraordinary geological situation.

Nuvolato e Ceppo di Gré®

Nuvolato di Gré

PETROGRAPHIC DEFINITION:
Dolomitic Breccia.

GEOLOGICAL POSITION:
Upper Triassic / Noric, 228 -
209 million years

EXTRACTION:
Location Gré - Castro and Solto
Collina (Bergamo) Italy

DESCRIPTION:
Sedimentary, carbonatic,
dolomitic, compact, veined
and breccia-textured, very
fine grained lytho-type. Its
color is gray, with paler to
darker hues.

USE:
indoor and outdoor

Ceppo di Gré®

PETROGRAPHIC DEFINITION:
Dolomitic Monogenic Breccia -
Litho-Arenite.

GEOLOGICAL POSITION:
Quaternary / Medium or Lower
Pleistocene, 1.800.000 - 125.000
years

EXTRACTION:
Location Gré - Castro and Solto
Collina (Bergamo) Italy

DESCRIPTION:
Sedimentary, carbonatic,
breccia-textured lytho-type;
holes and vacuoles may occur; it
consist of sharp fragments of
carbonatic rocks, whose sizes
revery irregular, generally pluri-
centimetrical, bond together by a
natural cement.
Its color is gray with several
shades and blue hues.

USE:
indoor and outdoor

Ceppo extreme water
jet

Ceppo line water jet

Ceppo cross water
jet

Nuvolato di Gré

Nuvolato di Gré is our exclusive stone.

The field has great potential, with the development of underground cultivation only, without interfering on the environment.

Nuvolato di Gré is a very compact stone suitable for outdoor and indoor use, thanks to its resistance to atmospheric agents, to trampling, to acids, but it is appreciated above all for its elegance and is used for floorings, claddings, furniture and design.

AGGLOCEPPO®: WE LAUGH A SECOND LIFE TO OUR STONE, REUSING THE NATURAL RESOURCES - CIRCULAR ECONOMY

Aggloceppo® is a registered trademark owned by MARINI MARMI. It is a homogeneous mixture that is obtained by mixing natural components: water, aggregates from Ceppo di Gré, extracted from our quarry in Gré, and white cement. The mixture is vibrated, compacted into blocks of 253 x 80 x 123/142 cm, according to the EN 13748 standard, applying the newest vacuum technologies.

After 28 days of the seasoning the blocks are ready to be sawn into slabs, in a minimum thickness of 2 cm.

With this product we mainly supply flooring, stairs and coverings.
