About us

Buzzi & Buzzi is a made in Italy company that was founded in 1990 by Pietro Buzzi and MariaLuisa Chiari who decided to cultivate and explain the insights and knowledge they had gained from years of experience in the lighting sector.

The company has established itself both nationally and internationally and now is driven by the 2 sons Andrea Buzzi and Dario Buzzi.

Since the early years, the company has relied on the contribution of renowned architects, thus recognizing the importance of design differentiation in the field.

Nowadays we have customers all over the world and we have even showrooms in Milan, our headquarter, and also in Paris, Dubai, Lugano and New York where we have a partnership located there. We're also certified ETL in order to sell in USA.

Technology and design come together to create new concepts of light.

This is the perfect symbiosis and the key element of all Buzzi & Buzzi products, which show how research has developed in recent years in several directions: innovative materials and lighting technology.

01.

**The simplicity of
the shapes in
combination with
the technology of
our products are 2
of our features.**

02.

Entering the specific production, we have **our main collection divided in 3 categories:**

1. **Recessed:** top of the range!! this is the line for which we are mainly known on the market of the products which disappear from sight and leave space only in the light.
Under this collection you will find also our “basic line” (realized simplifying the body as the electrical part less bulky/smaller). You will find products with aggressive price and generally used in large projects.
1. **Surface:** this is the line of ceiling products and wall light.
2. **Outdoor:** which is the line of outdoor products realized in Durcoral , a material twice more resistant than the concrete, salt resistant and chlorine resistant to all the atmospheric events.

BUZZI & BUZZI

03.

Iron Line

A new range of luminaires borned in 2019 with mechanic elements elegantly highlighted, is created in order to fulfill hi-tech projects and to answer the more and more frequent demands of iron-made custom products. Black, white or in RAL colors, the products of the Iron line collection demonstrate Buzzi & Buzzi's attention to research: technology and aesthetics combine to guarantee high quality.

The goal of this line is mostly the residential market, but It can reach even hotellerie, restaurant, public spaces and sectors as retailing, for instance we work with some fashion brands.

From the success of our recessed collection, we decided to invest on a new line of miniaturised products.

What the customer really appreciate on this is the perfect balance we have found among these 3 points:

1. Dimension, one of the smallest on the market
2. Power output (higher in confront of the other players on the market. Including the high end market
3. Bespoke products
4. Wide range of finishes
5. Miniaturizations

**Materials that
characterize our
production:**

04.

Coral[®]

This is the material for the interior and for the

Basic line. Coral is, among other things, the first material produced by Buzzi with unique characteristics . It is a material patented by Buzzi with more performance than the plaster. The main feature of coral is that compared to plaster, **it does not contain water and therefore does not crack**. In fact, plaster-based products deform over time as they evaporate the water.

All Buzzi products are paintables, no expansion and **Soft touch**

(Coral[®] is an innovative material conceived by Buzzi & Buzzi with the aim of combining good design with natural and technological ingredients. Coral[®] is very pleasant to touch, thanks to the velvety feel of its matt white surface. It can be easily decorated with any type of paint, either water or spirit based, allowing the lighting elements to be customised in a huge variety of ways

Aircoral®

AIRCORAL: this is a great evolution of Coral. Most of our production is now made using this material. It is characterized by its eco-active, anti-polluting (degradation of pollutants), anti-bacterial (ability to complete elimination of bacteria from surface) and photocatalytic properties (the material purify the air), effectively improving the quality of life for those areas where it has been installed.

This cleaning action is carried out even in the absence of light. AirCoral® is therefore ideal for use in all those public buildings as hospitals, health centers, hotels, schools and kindergartens, where there is a particular need for a healthy environment.

It doesn't work like a filter, but rather like a car's catalytic muffler. It does not absorb anything and it does not require handling. Simply put, the harmful agents of the atmosphere, in contact with this material, divide and the particles, taken individually, are not harmful to health.

With AirCoral®, we won a competition, called BETTAIR, co-founded by the European Commission, and which had as partner the University of Manchester, which carried out the tests: AirCoral® was recognized as revolutionary equipment capable of improve the air quality in the environment where it is installed.

This property has also been certified by an American certification body, The Tile Council of North America, which has issued us a certificate, which customers find in all deliveries, as a guarantee.

Is a material with a powerful antibacterial effect, which is able to transform harmful substances in the air into harmless substances with a process similar to chlorophyllous phptosynthesis (photo catalysis)

Coral Water out

WATEROUT: waterproof the material resistant to water and humidity and is suitable for warm environments. Our proposal is IP65 that could be used for example in wellness center and in all those environments where this type of protection is needed.

By modifying the structure of Coral®, Buzzi & Buzzi have now created Coral Water Out®, a new material, thoroughly tested by the Giordano Institute, which has proved highly resistant to water penetration. This water-repellent effect remains unchanged over time as it is not a matter of a superficial finish but rather a structural feature of the material itself. In this way, the property of impermeability is added to the qualities of durability, toughness, non-toxicity and aesthetic appeal already to be found in Coral®.

This material is therefore ideally suited to IP65/IP44-rated recessed lighting, suitable for use in external environments, and ideal for light systems in spas, wellness clubs, massage centres, swimming-pools, bathrooms, and all other locations where water and humidity restrict the choice of technical lighting.

Durcoral

DURCORAL : DurCoral® is a hi-tech, superbly efficient material. Twice as hard as cement, it offers exceptionally high performance in terms of quality, capacity and strength, and unlike other materials for external use, can be treated with any type of paint or finish.

It is characterized by an high resistance to scratching, ultra-violet rays, pollution and atmospheric agents, making it an ideal material for external applications.

The use is for external, anti-vandal, scratchproof, inert to salinity and chlorine

Lighting Simulation And Renders

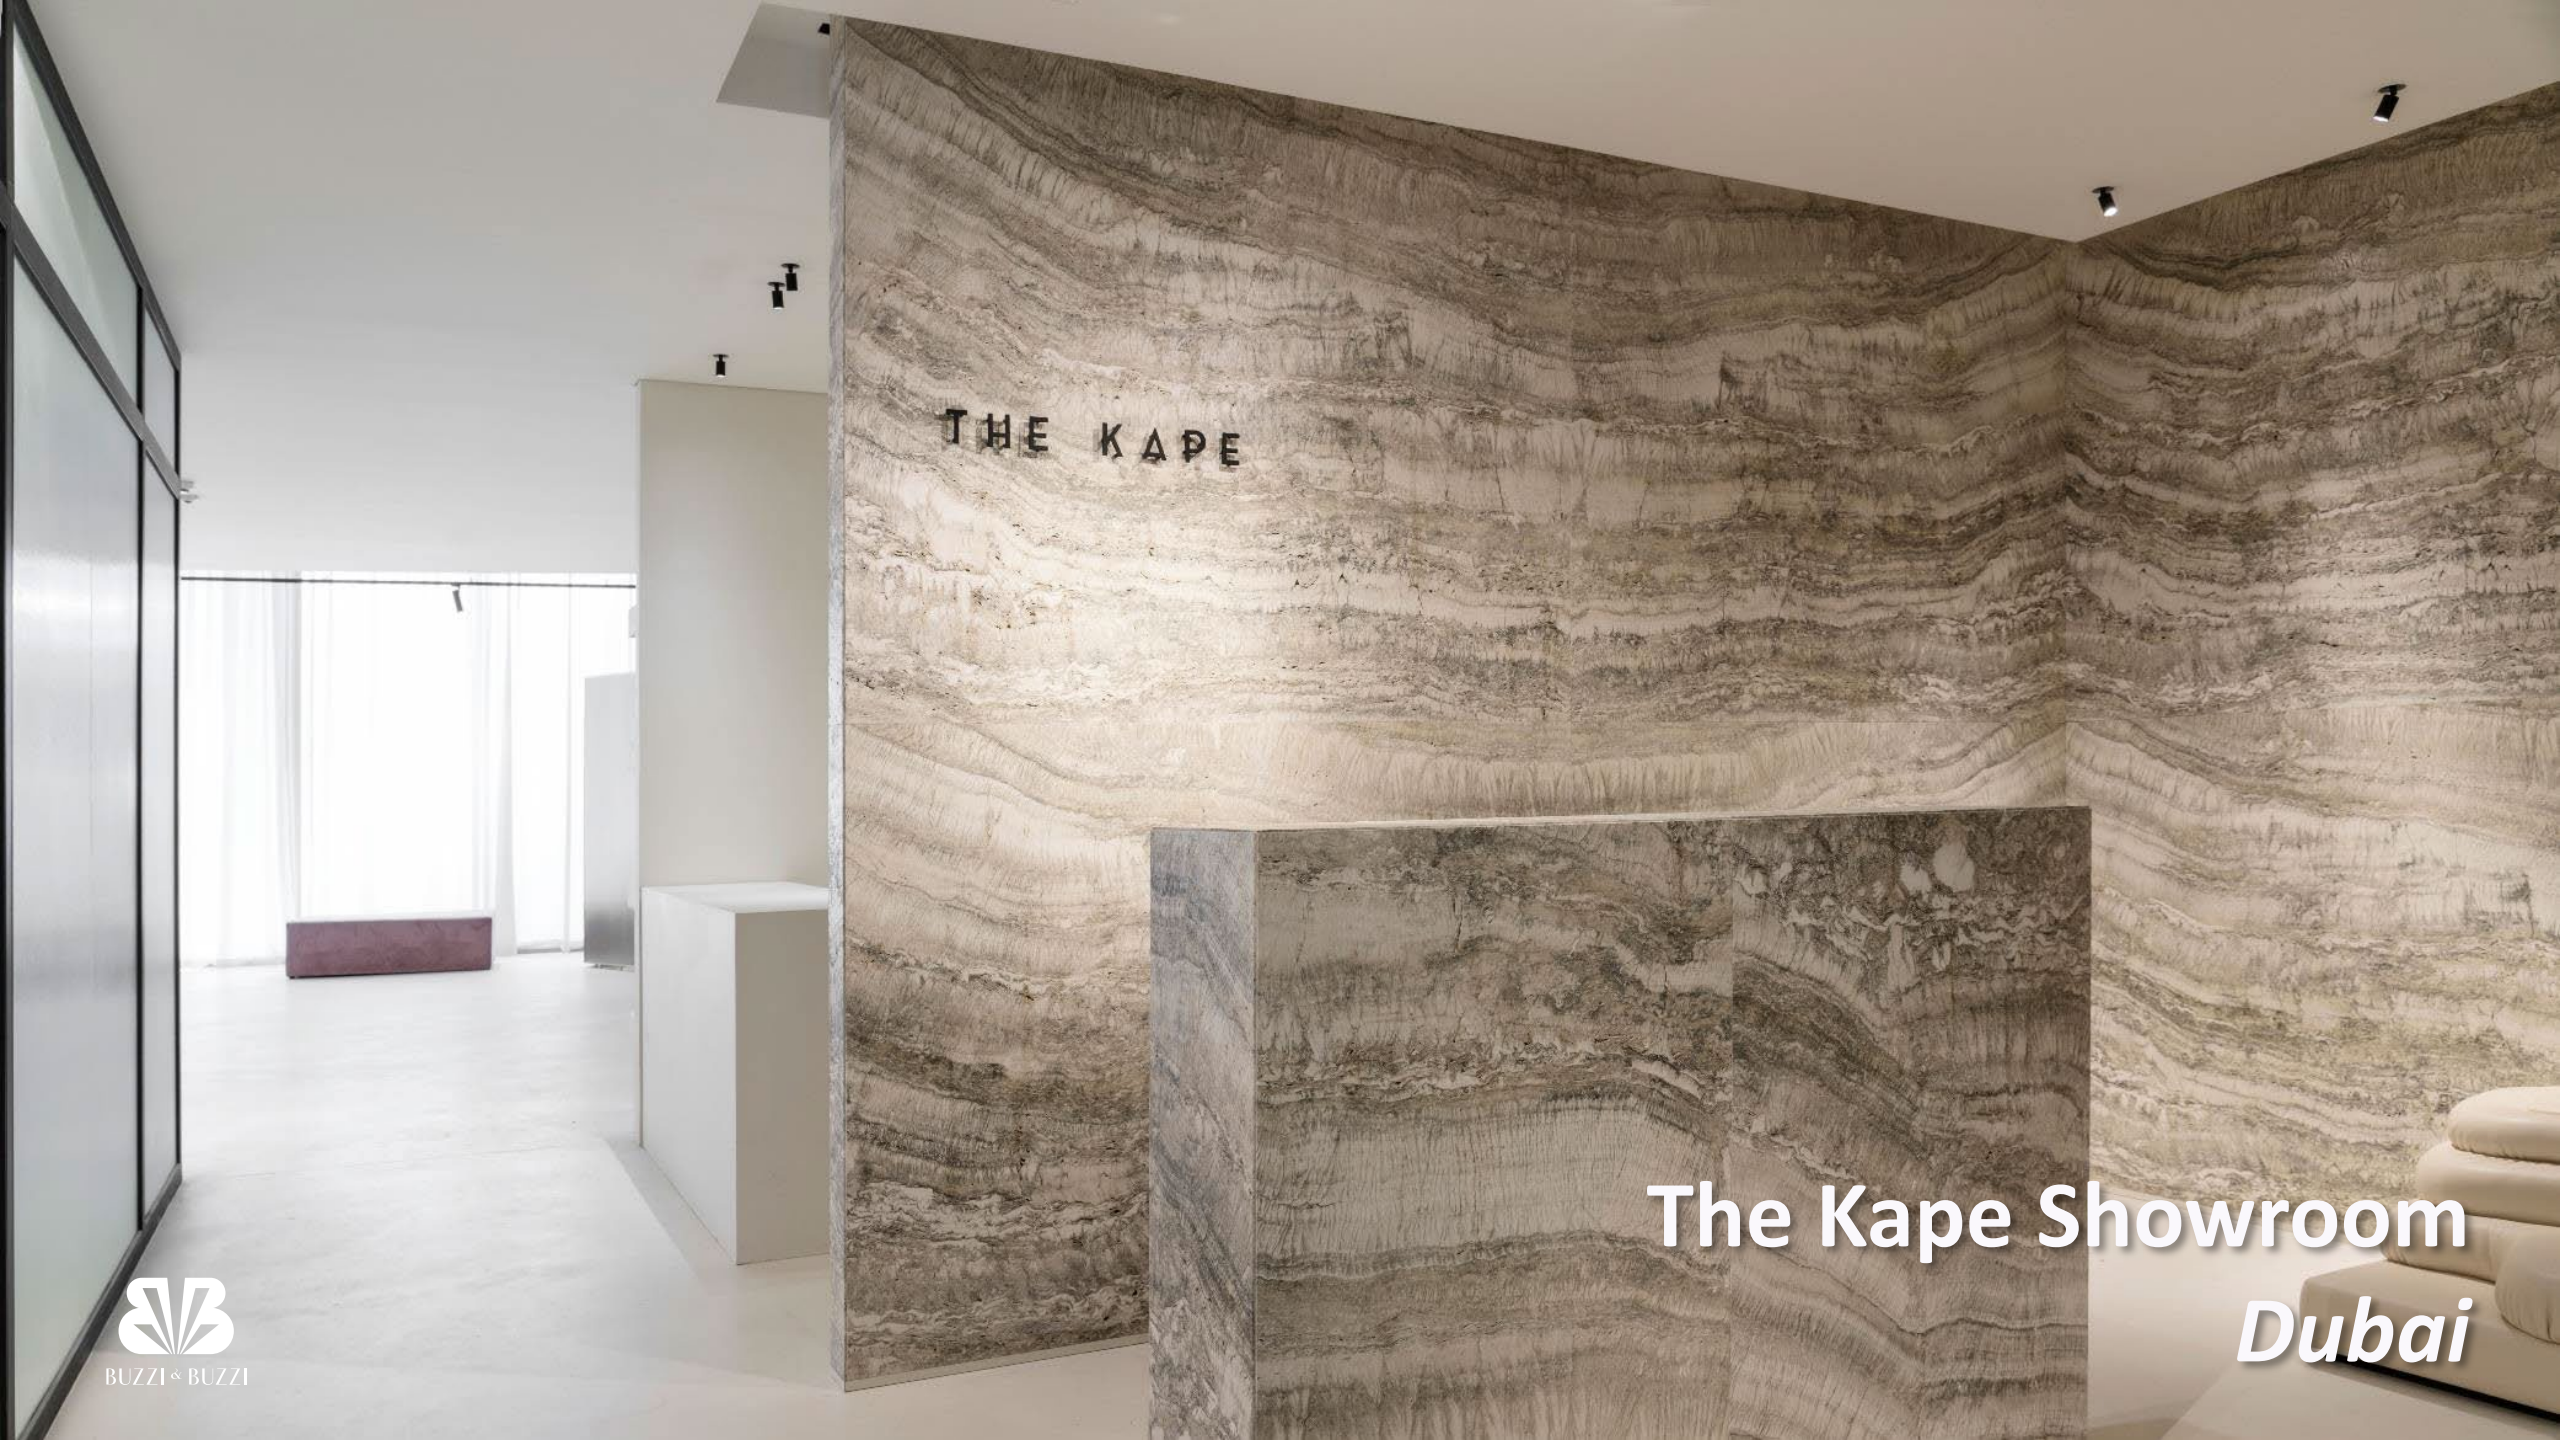

Further to the above lighting options, BUZZI & BUZZI also offers an extensive technical service that uses your CAD files to **generate simulations and lighting calculations**. This ensures the proposed lighting selection achieves the specific outcome you want.

This service is free of charge.
