

THE EXCLUSIVE NAILSWORLD METHOD FOR BIG TOE NAIL CARE

A simple and non-invasive technique to restore ingrown toenails and correct pincer nails

The health of the feet and toenails is essential for a comfortable and balanced life—especially for those who spend long hours standing or walking each day.

Ill-fitting shoes, certain medical conditions, trauma, or even genetic predispositions can often lead to pain in the legs, feet, and nails. Toenail issues and injuries may result from wearing shoes that are too tight or too loose, from conditions like fungal infections or psoriasis, or—quite frequently—from overly aggressive or improper pedicures.

In most cases, when a pedicure is performed in the presence of such problems, the professional simply removes the painful part of the nail.

By doing so, the vast majority end up crossing into the medical field of podiatry—often worsening the situation.

With over twenty years of experience in the nail industry, Nailsworld has developed an advanced toenail care system that goes beyond traditional methods. Remaining fully within the field of aesthetics—and without encroaching on the medical profession—these techniques allow for the treatment of ingrown toenails and correction of pincer nails without the use of braces, wires, scalpels, pointed nippers, cotton, or gauze. The result? Less pain for the client, immediate opening of the pincer nail—without having to wait for braces or clips to take effect—and the freedom for women to apply gel, acrylic, or semi-permanent polish right after the procedure.

Enhance your skills as a nail professional by learning how to care for your clients' feet with innovative and non-invasive techniques.

SOLVE BIG TOE PROBLEMS PERMANENTLY AND WITHOUT PAIN!

Before and After: Corrective Reconstruction of an Ingrown Toenail — One Week After Treatment

At Nailsworld, we take an innovative approach to treating big toe nail problems. Unlike others who simply trim the nail—without addressing the root cause—we rebuild the nail using advanced techniques that guide it to grow correctly, providing long-lasting relief.

Thanks to our method, we avoid invasive and painful treatments while delivering natural and definitive improvement. Our solutions are ideal for clients suffering from ingrown nails, pincer nails, or nail trauma—always with a focus on comfort and safety.

INGROWN TOENAIL: WHAT MAKES OUR RECONSTRUCTION DIFFERENT?

Before and After: Corrective Reconstruction of an Ingrown Toenail — One Week After Treatment

Ingrown toenails can be extremely painful and often recurrent. In many beauty salons—and even in some podiatry clinics—the standard approach to corrective pedicure is simply cutting the problematic nail. While this may provide temporary relief, it does not address the root cause.

At Nailsworld, we reconstruct the nail, guiding it to grow in the correct direction—completely pain-free.

Thanks to our innovative treatments, we offer a definitive solution that helps prevent recurrences and future discomfort.

PINCER NAIL: HOW WE CORRECT THE CURVATURE

Pincer nails are often caused by genetic factors and can lead to considerable discomfort.

Instead of relying on periodic trimming, we apply advanced reconstruction techniques to relax the nail's structure and prevent future complications.

Thanks to our experience and passion for foot care, we've developed a painless and lasting solution to help your clients walk without pain.

BIG TOE TRAUMA: HOW TO RESTORE A HEALTHY NAIL

Initial Reconstruction on a Traumatized Toenail

Big toes can suffer trauma due to impact or improper footwear, leading to nail deformation or thickening. At our center, we reconstruct the damaged nail to ensure healthy and even regrowth.

With our personalized treatments, we restore both the aesthetic appearance and comfort of your feet.

Removal and New Reconstruction of a Traumatized Toenail

WHY CHOOSE NAILSWORLD FOR BIG TOE CARE: OUR INNOVATIVE AND NON-INVASIVE APPROACH

Reconstruction After Surgical Removal of an Ingrown Toenail

At Nailsworld, we offer a unique and effective approach to big toe care, addressing the root of the problem rather than relying on temporary solutions.

Our technique involves reconstructing the nail to support natural, healthy growth—painlessly and without the use of invasive tools.

Unlike traditional treatments that involve cutting the nail or surgically removing it entirely, **our method gently guides the nail to grow correctly, resolving the underlying issue once and for all.**
