

TECHNICAL FEATURES:

Available in 4 different versions:

- Model S: 99.8 x 55 x 78 cm – without storage drawers
- Model M: 124 x 55 x 78 cm – with 4 drawers
- Model M PADDED: 134 x 60 x 78 cm – with 4 drawers
- Model L: 154 x 55 x 78 cm – with 8 drawers
- Suction Unit Only: 91 x 55 x 12/24 cm, with F7 or F9 filter

Ergonomic structure

Drawer height: 3 drawers of 9 cm + 1 large drawer of 22 cm.

Fully extendable drawers with soft-close system.

Worktop resistant to acids, solvents, and wear.

Swivel wheels (2 with brake).

Powerful suction motor with adjustable flow, up to 880 m³/h.

Dual air exhaust outlets.

Large-size filter made of recyclable, moisture-resistant and self-extinguishing materials.

Filter media: advanced filtration paper in PES and PP synthetic fibers, F7 or F9 class according to EN 779:2012.

Max fan noise level: 69 dB.

Filter cleaning: monthly.

Filter replacement: annually.

OPTIONAL ACCESSORIES:

Padded armrest (11 cm high), upholstered in washable and disinfectable colored eco-leather.

Triple power socket under the armrest (1 Schuko + 2 multi-sockets)

USB socket for chargers.

Matelassé-effect eco-leather table covering, available in 24 washable and disinfectable colors.

Custom-made designs available.

2-year warranty on manufacturing defects.

Support for spare parts and repairs available.

PROFESSIONAL
MANICURE TABLES

Your Health is the best investment

WHY IS A MANICURE TABLE WORTH THE INVESTMENT?

During manicure procedures, both technicians and clients are directly exposed to dust generated from nail filing.

Prolonged exposure to this fine dust can negatively affect health, leading to infections, allergies, and toxic reactions. According to international health guidelines, these fine particles—classified as PM10—can cause respiratory issues such as asthma, coughing, and chronic bronchitis. Moreover, nail professionals are at risk of skin conditions and musculoskeletal disorders due to prolonged incorrect posture.

To reduce these risks, it is essential to use safe and certified equipment and to follow best practices in workplace safety, in line with international occupational health standards.

WHAT SHOULD THE IDEAL MANICURE TABLE LOOK LIKE?

-Ergonomic, stable, and able to provide proper support.

-Resistant to wear and contact with commonly used products.

-Easy to clean and low-maintenance.

-Equipped with drawers of the right size to properly store and easily access tools and products.

-Fitted with armrests and power sockets placed conveniently for connecting lamps, micromotors, and lights.

But the most essential and non-negotiable feature is the presence of an **INTEGRATED DUST EXTRACTION AND FILTRATION SYSTEM**, capable of capturing, trapping, and collecting harmful nail dust and filing debris that pose health risks to both technician and client.

Safety for you and your clients

WHY CHOOSE A NAILSWORLD MANICURE TABLE?

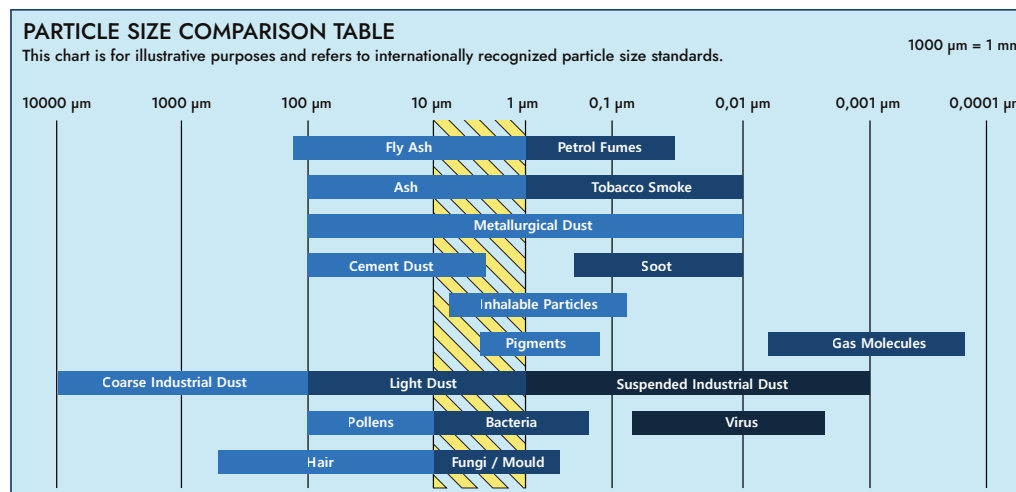

1. **Advanced Dust Extraction and Filtration System:** Nailsworld tables feature a powerful suction system equipped with ISO EPM1 filters (F7 and F9 under previous regulations), ensuring effective removal of harmful particles and a safe, healthy environment for both technicians and clients.

These filters capture up to 98% of particles as small as 1 µm—finer than those generated during manicure procedures—which can even enter the bloodstream. The filters are large in size, require cleaning once a month, and need replacing once a year based on an average use of 8–10 clients per day.

2. **Quality and Safety:** Nailsworld tables are made with high-quality, durable materials and ensure full compliance with safety standards. They are sturdy, reliable, ergonomic, and easy to maintain.

3. **Customizable Design:** with a wide range of design options, Nailsworld tables can be tailored in terms of size, finish, built-in power outlets, and armrests to perfectly match your salon's style and create a welcoming, professional environment.

4. **Extremely Quiet Operation:** while many manicure tables on the market offer decent suction power, what truly sets Nailsworld tables apart is their ultra-quiet performance.

FILTER EFFICIENCY BY PARTICLE SIZE RANGE ACCORDING TO EN 16890 STANDARD Classification based on EN 16890, widely used for professional air filters worldwide.		
CLASS	MINIMUM EFFICIENCY	TYPE OF PM
ISO EPM1	E(PM1), MIN >= 50%	VIRUSES, NANOPARTICLES, FUMES
ISO EPM2.5	E(PM2.5) MIN >= 50%	TONER DUST, FUNGI, SPORES, POLLEN, BACTERIA
ISO EPM10	E(PM10), MIN >= 50%	DUST, VARIOUS POLLENS
ISO COARSE	E(PM10), MIN <50%	SAND, HAIR

Performance without compromise

FORGET THE DEAFENING NOISE OF TRADITIONAL DUST COLLECTORS.

With our table, you can finally work in a calm and comfortable environment.

Our manicure table is engineered to be as quiet as possible, reaching a maximum noise level of just 69 decibels.

The most well-known competitor produces around 83 decibels—more than twice the sound intensity of a Nailsworld table! Since the decibel scale is logarithmic, a 10 dB increase means twice the perceived sound intensity.

A practical example?

A Nailsworld table in use sounds like an air conditioner, while the competitor's table is closer to a car horn or highway traffic.

Don't compromise on a calm and quiet working environment!

TRUST THE EXPERTISE OF NAIL PROFESSIONALS: CHOOSE NAILSWORLD FOR YOUR SALON

COMPARATIVE TABLE OF FILTER EFFICIENCY ACCORDING TO EN 779:2012 AND EN 16890 STANDARDS
