8 Drawers

PROFESSIONAL MANICURE TABLES

PROFESSIONAL MANICURE TABLE

A professional manicure table, designed and developed by nail experts to offer the best working conditions for beauty professionals.

The table is fully customizable with a range of optional features, including power sockets, filter, and armrest, and is available in a wide selection of colors. This allows you to enhance your salon's interior with your own personal style while configuring your equipment to meet your specific needs.

The integrated suction system is equipped with a high-performance, ultra-quiet motor that ensures a clean and healthy work environment. Airflow is adjustable via a manual speed controller, and the filter compartment is easily accessible from the operator's side for regular cleaning and maintenance.

The system is designed to capture fine dust and airborne particles effectively, minimizing exposure for both technicians and clients during manicure procedures.

The filter is made from recyclable materials, is moisture-resistant, and self-extinguishing.

It uses an advanced synthetic fiber media composed of PES and PP, featuring an F7 (or F9 upon request*) efficiency class according to EN779:2012 and an F1 fire resistance class according to DIN 53438.

Filters should be replaced once a year under standard professional usage, or sooner if visibly damaged or saturated.

TECHNICAL FEATURES:

Available in 4 different versions:

- Model S: 99.8 x 55 x 78 cm – without storage drawers
- Model M: 124 x 55 x 78 cm – with 4 drawers
- Model M PADDED: 134 x 60 x 78 cm – with 4 drawers
- Model L: 154 x 55 x 78 cm – with 8 drawers

SUCTION AND FILTRATION SYSTEM FOR NAIL TECHNICIAN WORKTABLE

nailsworld

BIG TOE NAIL CORRECTION TRAINING COURSE

Non-invasive techniques for ingrown and pincer nails – developed by industry experts.

The health of the feet and toenails is essential for a comfortable and balanced life—especially for those who spend long hours standing or walking each day.

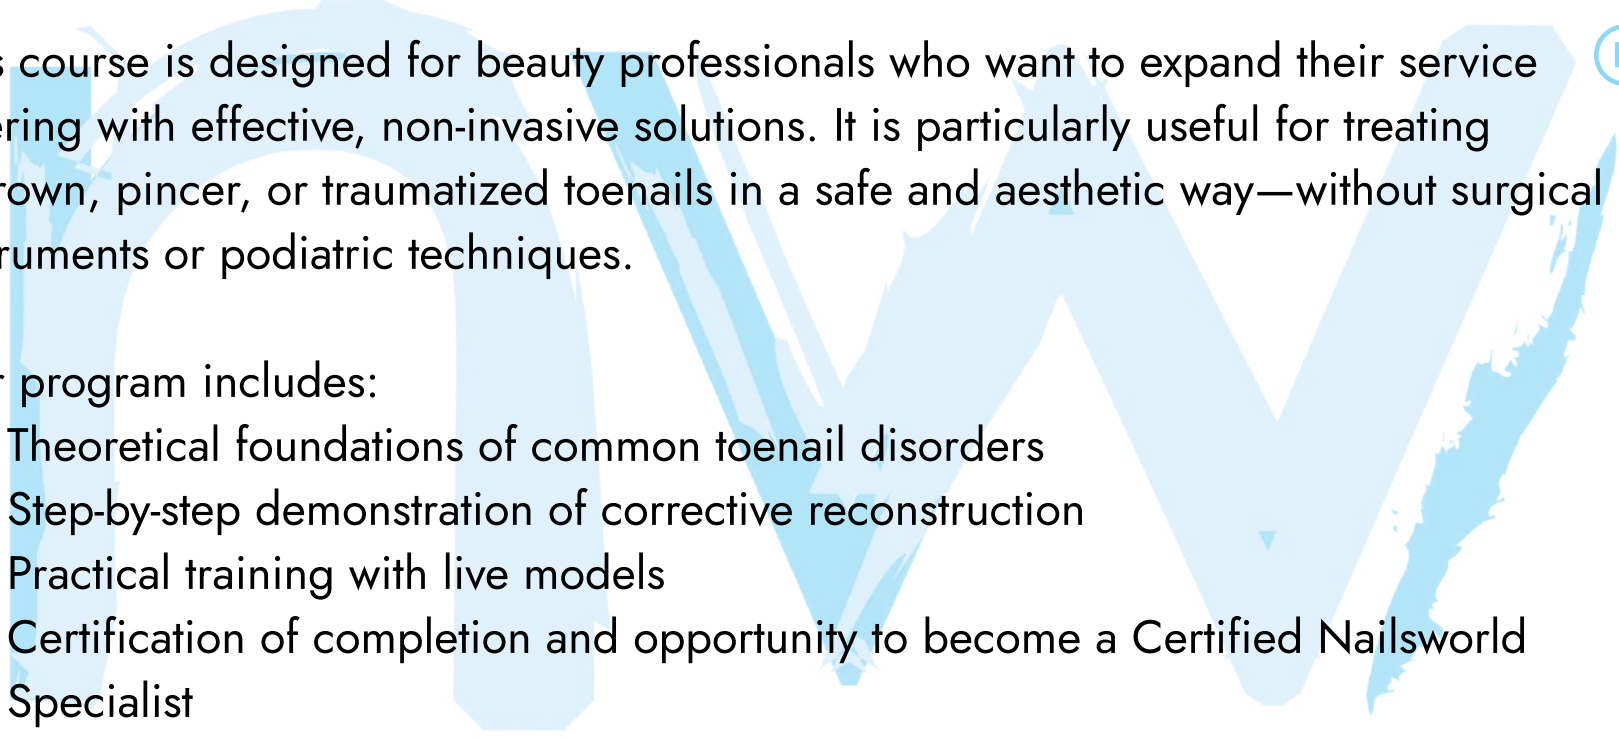

Ill-fitting shoes, certain medical conditions, trauma, or even genetic predispositions can often lead to pain in the legs, feet, and nails. Toenail issues and injuries may result from wearing shoes that are too tight or too loose, from conditions like fungal infections or psoriasis, or—quite frequently—from overly aggressive or improper pedicures.

In most cases, when a pedicure is performed in the presence of such problems, the professional simply removes the painful part of the nail. By doing so, the vast majority end up crossing into the medical field of podiatry—often worsening the situation.

With over twenty years of experience in the nail industry, Nailsworld has developed an advanced toenail care system that goes beyond traditional methods. Remaining fully within the aesthetic field—and without encroaching on the medical profession—these techniques allow for the treatment of ingrown toenails and correction of pincer nails without the use of braces, wires, scalpels, pointed nippers, cotton, or gauze.

The result?

- ✓ Less pain for the client
- ✓ Immediate opening of the pincer nail
- ✓ No downtime—clients can apply gel, acrylic, or semi-permanent polish right after the procedure

This course is designed for beauty professionals who want to expand their service offering with effective, non-invasive solutions. It is particularly useful for treating ingrown, pincer, or traumatized toenails in a safe and aesthetic way—without surgical instruments or podiatric techniques. 

Our program includes:

- Theoretical foundations of common toenail disorders
- Step-by-step demonstration of corrective reconstruction
- Practical training with live models
- Certification of completion and opportunity to become a Certified Nailsworld Specialist

Offer your clients real results with long-lasting comfort and visible transformation.
